Falcon Square Pvt. Ltd.

coimbatore, India

- Developed and maintained web applications using PHP CodeIgniter framework, collaborating with senior developers to implement new features and resolve technical issues. Assisted in database design and optimization, contributing to improved system performance and data integrity.

EDUCATION

M.sc in Information Technology, Bharathiar University

Jun '21 — May '23

Coimbatore, India

PROJECTS

ERP SOFTWARE

- **HRM (Human Resource Management):** Maintain employee records, including personal information, payroll details, and employment history. Manage employee leave requests, attendance tracking, and payroll integration. Monitor employee attendance through biometric systems, time clocks, or digital timesheets. Integrate attendance data with payroll for accurate salary calculations. Administer employee compensation, including salary adjustments, bonuses, and incentives. Manage employee benefits, such as health insurance, retirement plans, and allowances. Generate HR reports, including headcount, turnover, diversity, and other key HR metrics. Implement ESS features to allow employees to access and update their personal information, request leave, and view pay stubs. Enhance employee engagement and reduce administrative overhead.
- **Invoice Management:** Create and send invoices to customers with accurate billing information. Track payments received, outstanding invoices, and overdue payments. Generate financial reports, aging reports, and cash flow analysis related to invoicing.
- **CRM (Customer Relationship Management):** Maintain a centralized database of customer information, interactions, and purchase history. Capture and manage leads, opportunities, and sales pipeline.
- **Purchase Management:** Receive and process purchase requisitions from different departments. Generate purchase orders, track deliveries, and manage inventory levels. Maintain vendor records, negotiate contracts, and assess vendor performance.
- **Supply Chain Management (SCM):** Receive and process purchase requisitions from different departments. Generate purchase orders, track deliveries, and manage inventory levels. Maintain vendor records, negotiate contracts, and assess vendor performance.
- **Warehouse Management (WMS):** Oversaw warehouse operations, including inventory tracking, stock movements, and storage optimization, ensuring accurate and efficient order fulfillment. Implemented automated systems to streamline picking, packing, and shipping processes, improving overall warehouse productivity and reducing errors.
- **School Toys Management System**
Designed and developed a management system to track toy inventory, lending, and return operations in schools.
Implemented modules for student records, toy allocation, and reporting.
Used **PHP, MySQL, and Bootstrap** for building a user-friendly and efficient system.
- **Courier Office ERP**
Built an ERP solution to streamline courier operations such as parcel booking, tracking, delivery, and billing.
Integrated customer management, invoice generation, and delivery status updates.
Developed using **CodeIgniter, MySQL, and jQuery**.
- **Production ERP**
Developed a production-focused ERP system to manage raw materials, manufacturing workflows, and finished goods.
Added features for stock monitoring, purchase orders, and production reports.

- Built using **PHP (CodeIgniter), MySQL, and AJAX** to ensure smooth operations.

WEBSITE DEVELOPMENT

- Content management system: Experienced in building custom modules and plugins for the CMS using PHP in CodeIgniter. Successful track record of extending CMS functionality to meet unique client requirements, such as enhancing user interfaces, and optimizing performance, resulting in tailored and feature-rich CMS solutions.

REST API

- **Food Admin System:**
Developed and implemented a RESTful API for a food administration system, enabling efficient management of menu items, orders, and customer interactions.
- I developed APIs for a task-based application with clean and scalable architecture. Implemented secure endpoints for task creation, updates, and user operations. Ensured high performance, proper validation, and smooth data flow between frontend and backend.

Static Website (HTML, CSS, JavaScript)

- Created a fully responsive static website with modern UI/UX practices.
- Implemented interactive features using **JavaScript** and styled with **CSS3 & Bootstrap**.
- Optimized for performance, SEO, and cross-browser compatibility.
