I am an Application and Web Developer with 1.5 years of experience in building scalable mobile and web applications using Flutter and Angular. I specialize in creating responsive, user-centric solutions with a strong focus on UI/UX, API integration, and performance optimization. I have developed dynamic features such as real-time chat and notifications, ensuring seamless performance across devices. I prioritize clean code, modular architecture, and delivering high-quality user experiences.

Professional Experience

Jr. Software Engineer

Edbrook Pvt Ltd.,

Sep 2023 - 2024

Project : Clap App

- Designed and developed responsive UI screens for the CLAP ride-hailing app using Flutter widgets, covering onboarding, booking flow, payment options, and real-time ride tracking
- Implemented core app functionality using Dart and Flutter, including state management, real-time ride updates, session handling, and secure user authentication.
- Collaborated with backend developers to integrate Flutter frontend components with REST APIs, improving app performance, speed, and reliability.
- Conducted usability tests and performed iterative UI/UX enhancements to deliver a smooth cross-platform user experience.

Technologies used: Flutter, Dart, RESTful APIs, Postman, Provider.

Software Engineer

Zuntra Digital Pvt Ltd.,

Sep 2025 - Present

Project : Huzzler App

I developed a full-featured freelancer marketplace app similar to Fiverr using Flutter and Firebase, where I designed responsive onboarding, profile creation, gig listing, and job posting screens. I integrated Firebase Authentication (Email & Google) for secure access, built a real-time chat system using Firestore, and added features like LinkedIn linking and profile sharing. Additionally, I used Python for backend services, API integrations, and data handling.

Technologies used: Flutter (Dart), Python, Firebase, RESTful APIs, Postman, and VS Code.

Project : Huzzler Web App

I developed a full-featured freelancer marketplace web application similar to Fiverr using Angular and Firebase. The application includes responsive user onboarding, profile creation, gig listing, and job posting modules, designed to work seamlessly across devices. The system follows a scalable, modular Angular architecture and communicates with backend services through RESTful APIs. I also utilized Python for backend services, API development, and business logic, enabling secure data handling and smooth integration with the frontend.

Technologies Used: Angular, TypeScript, Python, Firebase (Authentication & Firestore), RESTful APIs, Postman, HTML, CSS, VS Code.

Education

Alagappa University

BCA - 84%

2022

Technical Skills

Python, MySQL, Flutter(Dart)

Flask, Django

HTML, CSS, Angular

Visual Studio Code, Android Studio, Postman
