

Venkateswarlu Reddy Lekkala

Web & Mobile Application Developer

 venkateswarlureddy647@gmail.com  +91 8688479503  <https://www.linkedin.com/in/venkateswarlu-reddy/>

React Native Developer with hands-on experience building production-ready mobile applications integrated with REST APIs. Skilled in React Native, API integration, authentication, role-based access control, and backend coordination using FastAPI and MySQL. Experienced in delivering scalable mobile solutions with clean and maintainable code.

EDUCATION

Bachelor of Engineering

2019 - 2023

Indira Institute Of Technology And Sciences 7.22 C.G.P.A

Experience

Intern Feb 2024 - June 2024

Cloud Software Solutions, Bengaluru

Developed a full-stack e-commerce website with React.js (frontend) and Django (backend). Designed and implemented responsive, user-friendly UI components using React.js. Created and integrated RESTful APIs in Django to manage products, users, and orders. Integrated Razorpay for secure online payment processing and order tracking.

Associate Software Engineer - Aug -2024 - July 2025

Aegletek Private Limited, Hyderabad

Designed and implemented role-based permission system to control CRUD operations based on user roles. Built and integrated Single Sign-On (SSO) authentication to enable seamless and secure user access across multiple applications. Developed secure session handling and user authentication mechanisms. Optimized MySQL queries for real-time role and permission validation. Integrated FastAPI for backend API development and modular services. Developed export features (CSV, Excel) based on filtered Solr queries. Built Python schedulers to track and process session timeouts and background tasks. Handled data transformation and indexing for Apache Solr, including dynamic facet filters. Converted raw database and CSV data into Solr-compatible formats for advanced querying.

Software Trainee - Aug 2025

Young Minds Technology Solutions, Tirupathi

Developed a mobile application using React Native to manage construction operations efficiently. Built a web application to support administrative and management workflows. Implemented modules for: Designed and integrated REST APIs using FastAPI for seamless communication between web, mobile, and backend systems. Used MySQL for structured data storage and efficient querying. Implemented authentication and role-based access control for secure application usage. Worked on file handling features including CSV/Excel uploads and downloads. Collaborated with team members to understand requirements, fix issues, and deliver features on time. Focused on clean, maintainable code and scalable application architecture.

Projects

Appsuite:

Tech Stack: FastAPI, MySQL, React.js

Goal: A platform to manage onboarding, authorization, and billing for subscription-based multi-tenant applications.

Key Elements:

- Designed and implemented a role-based permission system, assigning specific permissions to roles and mapping them to users.
- Ensured precise control over CRUD operations (Create, Read, Update, Delete) for different modules.
- Developed functionality to define and manage application-specific permissions for various features.
- Implemented secure session handling to maintain user authentication and track active user sessions.
- Built APIs and frontend workflows to validate user permissions for executing CRUD operations across multiple modules. Ensured operations like creating, editing, deleting, and viewing data adhered to the defined permissions for each user role.
- Used Python schedulers to monitor and handle token session timeouts

Jinka:

Tech Stack: Apache Solr, FastAPI, MySQL, React.js

Goal: Optimized database queries and application logic for real-time role and permission checks.

Key Elements:

- Designed and optimized MySQL metadata schemas to support seamless integration with Apache Solr for high-performance data retrieval and indexing.
- Implemented facet filtering in Solr to enhance search functionality, enabling users to define, save, and restore complex queries for future use.
- Supported user-defined export requests by enabling data export in Excel and CSV formats directly from filtered results.
- Developed component connectors to streamline data transformations, converting database data into Solr-compatible formats for indexing.
- Importing and transforming CSV datasets into Solr for enhanced querying capabilities.
- Utilized Python schedulers to monitor and process requests in the MySQL database

AMR Infrastructure(Web & Mobile):

Tech Stack: Node.js, MySQL, React.js (Web), React Native (Mobile)

Goal: Developed an integrated web and mobile application to digitize and manage construction site operations, enabling real-time tracking of workforce, expenses, payments, purchases, and project progress.

Key Elements:

- Developed a web application using React.js to support administrative and management workflows.
- Built a mobile application using React Native for on-site data entry and real-time operational updates
- Designed and implemented RESTful APIs using FastAPI to ensure seamless communication between web, mobile, and backend services.
- Integrated MySQL for structured data storage and optimized queries for efficient data retrieval.
- Implemented authentication and role-based access control (RBAC) to secure application access across multiple user roles.
- Developed modules for:
 - Labor attendance and workforce management
 - Expense tracking and payment management
 - Purchase and material tracking
 - Project progress monitoring
- Ensured clean, maintainable code and scalable application architecture.

SKILLS

Programming Languages : Python, JavaScript, TypeScript,React Native
Frontend Technologies : React.js,HTML, CSS, Bootstrap, Tailwind Css,Shadcn Ui
Backend Frameworks : FastAPI, Django(Basic),
Development Tools : Vs Code,PyCharm,

LANGUAGES

.TELUGU .ENGLISH .KANADA
