Thanjavur, Tamil Nadu

SUMMARY

Detail-oriented Quality Assurance Engineer with 2+ years of experience in Manual and Automation Testing, including Functional, Regression, UI, Cross-Browser, and API Testing using Postman and Selenium (basic). Strong understanding of SDLC, STLC, and Agile methodologies with hands-on expertise in test case design, test scenario creation, defect tracking, and release validation. Proven ability to identify critical defects, improve application stability, and ensure high-quality software delivery.

EXPERIENCE

Junior Quality Assurance Engineer

GoWebEz 04/2024 - Present Guindy

Company Description

- Performed manual, functional, and regression testing to validate application features and ensure defect-free releases.
- Designed and executed 120+ test cases and test scenarios, ensuring maximum test coverage.
- Managed complete defect lifecycle, including logging, tracking, retesting, and closure of defects.
- Conducted API testing using Postman to validate backend services, request/response data, and status codes.
- Executed cross-browser testing to ensure compatibility across multiple browsers and devices.
- Worked in an Agile (Scrum) environment, participating in sprint planning, release validation, and regression cycles to ensure high-quality software delivery.
- Handled client-driven requirement changes by planning and executing weekly release cycles, including regression testing and final release validation to ensure smooth production deployment.

PROJECTS

LDG- Language Dynamics Group

Domain: EdTech (Educational Assessment Platform)

An EdTech platform for online student assessments that provides role-based access to Admins, Teachers, School Managers, District Managers, and Specialists for managing test data and performance reports.

- Tested end-to-end student test-taking workflow, including login, test access, submission, and result generation.
- Validated license-based category mapping, ensuring students could access tests only when the correct license category was assigned.
- Verified role-based access control (RBAC) to ensure proper permissions for Admin, Teacher, School Manager, District Manager, and Specialist roles.
- Tested AI-based voice assessment feature (Whisper AI), where students submit voice responses and scores are generated automatically.
- Validated the accuracy of the auto-scoring mechanism for voice-based tests.
- Verified student performance reports and analytics to ensure correct score calculation and data display.
- Performed UI, usability, and regression testing during requirement updates and weekly releases.
- Validated system stability under high student load.

Fundmesmart- Crowdfunding Platform

Domain: (Crowdfunding & Fundraising Platform) FundMeSmart is a FinTech-based crowdfunding platform where organizations raise funds and supporters donate using a unique organization code via the mobile application. Key features include Pay It Forward donations, Kick It Back cashback, coupon redemption, and app gifting.

- Performed end-to-end manual testing for organization creation, role management (Admin, Participant, Individual), and donation workflows.
- Tested organization-based crowdfunding process, ensuring supporters could donate using a unique organization code via the mobile app.
- Conducted mobile application testing to validate donation flow, payment processing, and user experience.
- Executed functional and regression testing during weekly release cycles based on client requirement changes.
- Designed and executed detailed test cases and test scenarios for subscription purchase, coupon redemption, wallet, and donation modules.
- Validated "Pay It Forward" donation logic and cashback calculation under the "Kick It Back" feature.
- Performed UI/UX testing to verify layout alignment, field validations, and error message handling.
- Conducted cross-browser and compatibility testing to ensure consistent application performance.
- Logged, tracked, retested, and verified defects before production deployment.
