CAREER OBJECTIVE

Aspiring AI/ML Engineer with hands on experience at TSK Automations, skilled in developing models, programming, problem solving, and developing scalable conversational AI, voice technologies, and generative models. Seeking to drive real-world impact in a dynamic organization.. Passionate about building efficient, scalable applications and models and eager to work on innovative projects that create real-world impact.

EDUCATION

B. Tech Artificial Intelligence and Data Science | Rajalakshmi Institute of Technology, Chennai | **CGPA: 7.82 (2021-2025)**

Grade 12 (HSC) | Velammal Matriculation Hr. Sec. School , Chennai | **Percentage: 91.62 % (2021)**

Grade 10 (SSLC) | Velammal Matriculation Hr. Sec. School , Chennai | **Percentage: 94 % (2019)**

INTERNSHIP

TSK Automations – Chennai (Feb – Apr 2026)

During my internship at TSK Automations as an AI/ML Engineer, I developed AI-driven automation solutions for real-time communication and workflow optimization. Gained hands-on experience in Python, NLP, speech processing, and backend development using Django, along with API integration and deployment of scalable AI models.

Besant Technologies - Chennai (Jun – Aug 2025)

During my internship at Besant Technologies, I developed a Voice Emotion Detection Web app using python (Flask) . This project enhanced my skills in audio processing, python libraries like NumPy, Pandas, Sci-kit learn, deep learning and end-to-end machine learning deployment.

PROJECTS

AI-DRIVEN HOSPITAL AUTOMATION SYSTEM | 2026

Developed intelligent, real-time communication and automation solutions for hospital workflows using AI/ML techniques in Python. Designed and implemented interactive systems to streamline patient appointment booking and enhance user engagement through dynamic, human-like interactions. Built automated voice-enabled solutions for healthcare professionals to access and manage appointment schedules efficiently, improving operational productivity and real-time response generation, contributing to improved decision-making and patient experience.

DIABETES PREDICTION WEBSITE | 2025

Analyzed the diabetes disease using machine learning algorithms in Python and developed a web-based prediction system using logistic regression model and integrated a python (Flask) backend to process data and generate predictions focuses on improving the health care in decision-making.

SPEECH EMOTION RECOGNITION| 2025

Built a web-based voice emotion recognition system using the RAVDESS dataset. Extracted advanced audio features (MFCC, Mel spectrogram, chroma) with Librosa and developed a deep learning hybrid CNN + LSTM model in Tensorflow achieving a good accuracy. Integrated the model with a Flask backend and designed a front end for real-time voice input and emotion prediction.

TECHNICAL SKILLS & INTERESTS

Languages: Python, SQL, Java, C/ C++, HTML, CSS, Java Script

Frameworks: React, Node.js, Flask, Fast API

Developer tools: Git, VS code, AWS

Libraries: Pandas, NumPy, Matplotlib, Sci-kit learn, Seaborn, Librosa

Area of Interests: Data Analytics | Artificial Intelligence | Web Development | Python developer

CERTIFICATIONS

Foundations of Project Management (2023) | GOOGLE

Python for Data Science (2024), Cloud computing (2023) | NPTEL

Data Science (2024), Machine Learning on Dimensionality Reduction (2024) | IBM

AWS Academy Cloud Foundations (2023) | AWS
