- Backend & Database: Firebase, Supabase
- Analytics & Monitoring: Google Analytics
- API Services: API integration
- Deployment and Publishing: Google Play Console
- Version Control & CI/CD: GitHub(CI/CD)
- Packages: Microsoft Office 365

Projects

- Developed a fully functional **Alarm Cycle Mobile Application** (Live in Google Playstore) featuring cloud synchronization, in-app purchases and interactive challenge based alarm dismissal. Designed to compete with existing market apps by focusing on reliability, user engagement and seamless cross device experience.
- Worked on the development of **Enterprise - grade Hotel Management Application** as part of key organizational project at Aastra Technologies with modules for booking, customer management and operations, focusing on performance, scalability and user experience.
- Developed and published an app **BiznusX** in Google playstore. BiznusX is an innovative app designed to bring entrepreneurs together by providing a centralized platform for sharing, discovering and collaborating on business ideas. The app serves as a hub where aspiring and established entrepreneurs can showcase their concepts, receive feedback and connect with potential partners, investors and mentors.
- Developed an API-based **Weather Explorer Application** providing real-time weather data and 7-day temperature trends for any city. Designed an intuitive user interface with dark mode and light mode support for an enhanced user experience. Integrated external weather APIs to deliver accurate and up-to-date weather data.
- Developed a **To-Do List(a task management application)** with task categorization, priority levels and sorting features to improve productivity and organization. Implemented dark/light mode support for an enhanced user experience.
