PROFESSIONAL SUMMARY

Full Stack Web Developer with 2.5 years of experience building and maintaining production web applications using CodeIgniter, Laravel, MySQL, and JavaScript. Currently the most senior developer on a 7-person team, driving REST API development, database design, and backend performance optimization. Delivered an 80% improvement in page load and API response time on a Tamil Nadu government e-commerce platform, and built and maintain a live school management system used by approximately 5,000 students and staff.

CORE SKILLS

Languages	PHP 8, Python, JavaScript
Frameworks	CodeIgniter (3 & 4), Laravel
Frontend	HTML, CSS, Bootstrap, Tailwind CSS
Database	MySQL, PostgreSQL
Tools	AJAX & jQuery, Git, Version Control
Concepts / Expertise	REST API Integration, MVC Architecture, Payment Gateway Integration, Debugging & Error Handling, Performance Optimization

PROFESSIONAL EXPERIENCE

Brainstorm Software

Full Stack Web Developer | April 2024 – June 2026

- Most senior developer on a 7-person team; informally guide feature implementation and troubleshooting while collaborating through a shared company Git repository.
- Developed and maintained web applications using CodeIgniter (MVC framework) and MySQL, including VCVRT (live, ~5,000 users) and Tampcol, a Tamil Nadu government e-commerce platform.
- Built responsive frontend interfaces using HTML, CSS, JavaScript, jQuery, and AJAX; integrated RESTful APIs while managing backend logic, database queries, and user authentication.
- Collaborated with cross-functional teams to gather requirements, implement features, and resolve bugs.
- Optimized application performance, security, and scalability using clean, maintainable code; managed version control with Git and deployed updates in a structured development environment.

Shiash Info Solutions Private Limited

Python Web Developer Intern | June 2023 – August 2023

- Contributed to development and maintenance of web applications using Django, supporting backend logic and API integration for efficient data processing.
- Worked on backend logic, API integration, and MySQL database operations.
- Implemented RESTful APIs for seamless data exchange between frontend and backend.

PROJECTS

Wilfred Sample Collection Platform — Integrated with LIMS API

Developed and enhanced application modules for sample collection and tracking with seamless LIMS API integration for real-time data synchronization. Implemented robust request handling, validation, and optimized database operations to ensure reliable, scalable, and production-ready performance.

AeinHolidays — Travel Booking CMS

Website for a travel agency offering holiday packages, tour details, and contact enquiry. Built with PHP/CodeIgniter with a dynamic admin panel for package and content management. Live: aeinholidays.com

VCVRT — School Management System

Live production application serving approximately **5,000 students and staff** to manage student records, exam results, attendance, staff modules, and student certificate verification. Executed efficient database operations and backend logic to ensure accurate data handling and improved system performance. Live: vcvrt.org

Tampcol — Tamil Nadu Government E-Commerce Platform

Maintained and managed a government e-commerce platform, improving page load and API response time by **80%** through pagination and query optimization. Designed dynamic shipping tariff calculation logic based on India Post's published rate structure, integrated the Razorpay payment gateway for online transactions, and developed and maintained Android-facing APIs supporting the mobile application. Live: tampcol.com
